Feb 22, 2020 Process Python for Windows 7 it works fine, Thanks in advance. A: This is the cause of your problem: "Download the .NET Framework" i would suggest you to get rid of this as it seems to be outdated and outdated versions of .net may cause other issues when you run the code. Q: Why is the -n flag for git push not sending my SSH key? I'm trying to send a commit message from my local computer to a remote repository. I've been at it for a few hours and have tried many different variations (from various tutorials) to get my SSH key to work. Here are the commands that I've tried. git push -n git push --with-https git push --with-username My SSH key is in ~/.ssh/id_rsa, but the key is not printed in the repository. I've also tried putting the path where my SSH key is located to the config file. Here's the relevant parts from my config file. [remote "origin"] url = ssh://my-repo.example.com/git/my-repo/ fetch = +refs/heads/*:refs/remotes/origin/* [branch "master"] remote = origin merge = refs/heads/master [user] name = my-user email = my-email@example.com Any help would be appreciated. Thanks! A: The following worked for me. On your local machine (using OS X): Install the OpenSSH-agent package (sudo apt-get install openssh-client-openssh-server-keychain) Add your public key to your ~/.ssh/authorized_keys file Run ssh-add ~/.ssh/id_rsa Then on your remote machine (also using OS X): Add the ssh key to the ~/.ssh/authorized_keys file Run ssh -vvv -p 22222 username@hostname.xxx.com Look for a request to add your key: debug1: key: algorithm: curve25519-sha256,192 bits debug1: expecting SSH2_MSG_KEX_CURVE_PROP debug1: kex:
